

DEVICE FOR JOINING TOGETHER TWO PARTS ARRANGED AT 90°
WITH RESPECT TO EACH OTHER

ABSTRACT

Device for joining together, in a longitudinal direction (X-X), two parts arranged at 90° with respect to each other, comprising a head integral with one of the two parts to be joined, a pin integral with the other of the said parts to be joined, the head having, arranged inside it, a gearing able to be actuated in a direction (Y-Y) perpendicular to the longitudinal joining direction and operate the pin so to determine joining together of the two parts in the longitudinal direction (X-X).
